

REPEL + DEET REPELLENT has been formulated scientifically to maximize the repellent effect on insects causing disease in horses in a safe manner.

ALLERGIC REACTIONS

Although it is unlikely that the horse will be allergic to this product, it is recommended that an allergy test be performed prior to using **REPEL** liberally. In order to conduct such a test, spray lightly in a small area on the horses neck. If no reaction appears after 24 hours, it can be assumed that no allergy. A reaction typically would take on the form of urticaria (hives- lumps on the skin)

NO banned substances
